

Note: The old exams that follow this page are based on the first edition of the textbook, and some of the procedure names are different from the new edition. Examples:

old	new
mapcar	map
map	stream-map
head	stream-car
tail	stream-cdr
empty-stream?	stream-null?
sequence	begin
attach-type	attach-tag
type	type-tag

There may be additional minor differences; this isn't an exhaustive list. Use the old exams as examples of the kinds of questions we ask, and the kinds of answers we want, but don't copy code from these solutions without thinking about it!
